

AI Workflows

Visual AI workflows that turn your collaborative canvas into complete outputs—from strategy docs to prototypes—while keeping your team aligned and accelerating work from brainstorm to breakthrough.

The AI Productivity Trap

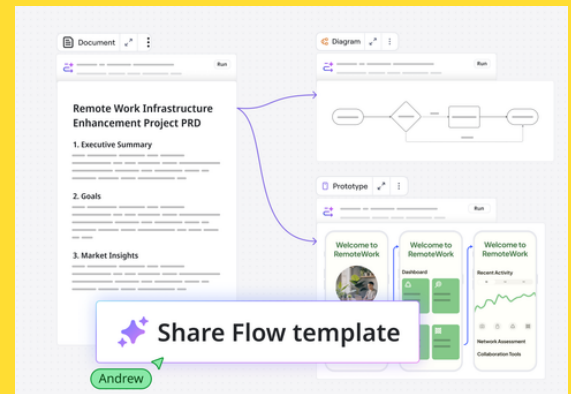

82% of decision-makers want **AI that drives teamwork** and collaboration—not just individual efficiency.

While AI adoption accelerates, most tools focus on individual productivity—creating "amplified silos." Teams face friction from tool switching, integration difficulties, and security concerns, all while needing to connect strategy to execution.

AI Workflows: Transform how your teams work with AI

- 1 Accelerate delivery** Collapse entire processes from weeks to hours. Transform brainstorms into PRDs, research into prototypes, workshops into action plans. Deliver faster without sacrificing quality.
- 2 Use your collaborative work as the prompt.** Skip the blank text box. Feed your existing team work—sticky notes, diagrams, research—directly into AI. Get smart, relevant results without manual explanations.
- 3 Make your best work repeatable.** Nail a workflow once, then save it as a template. Share it across teams. Turn one-time brilliance into standard practice that scales.

*"Using Miro AI Workflows **reduced our project duration by 50%**. Requirements extraction and process mapping that used to take weeks now happens in days—with **better quality** and **standardized documentation**."*

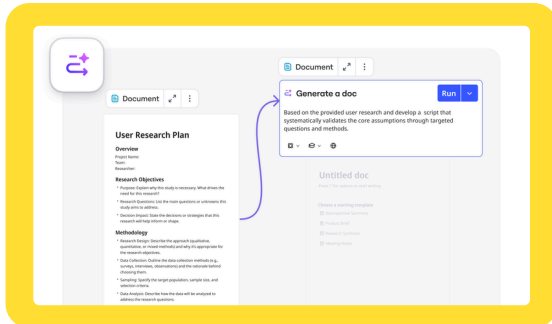

Rainer Grau, Managing Director at Smart
System Guild
Project: ERP replacement

KEY CAPABILITIES

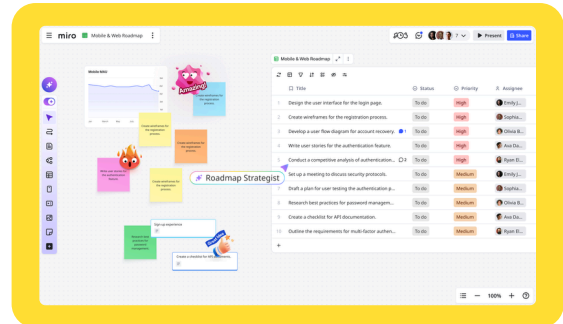

The only AI platform built for team collaboration and enterprise scale. Start accelerating team innovation.

Contact your Miro account team or visit miro.com/products/ai-workflows

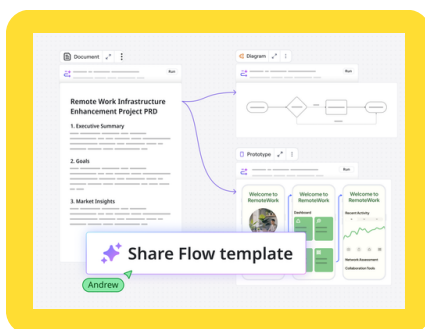

Visual AI automation in a collaborative space

Build multi-step Flows that automate series of tasks—from drafting strategy documents to building prototypes—while keeping teams in control at every step.

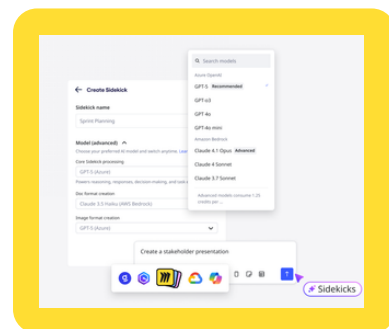

AI assistants join the team

Easily build and work with Sidekicks—AI assistants that bring specific expertise to your projects.

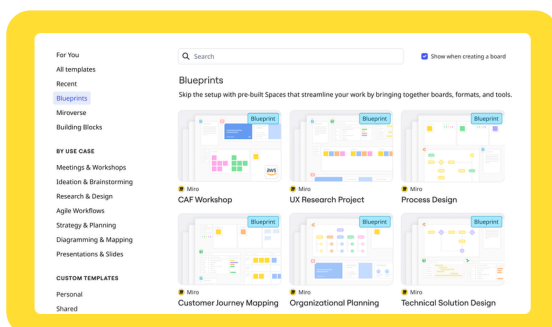

Scale best practices with reusable templates

Create custom Flows and Sidekicks to match how your team actually works, then share them as templates everyone can use.

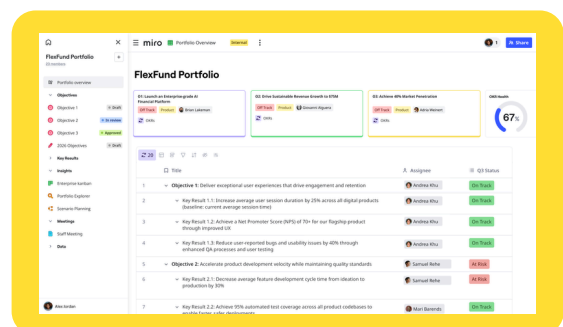

Connect your enterprise knowledge

Link to Microsoft Copilot, Gemini Enterprise, Glean, or Amazon Q so every AI action gets your company context.

Start fast with ready-to-use templates

Kick off with expert-designed workflows from Miro and industry leaders. Run them immediately, then tweak to fit your team's needs.

Enterprise-grade governance

Set permissions by team, feature or model and collect audit logs, backed by ISO 42001. Access all leading LLMs through one secure license.
